Metagenomics is the study  
of genetic material

recovered directly from  
environmental samples. The

broad field may also be  
referred to as environmental

genomics, ecogenomics or  
community genomics. While

traditional microbiology  
and microbial genome

sequencing and genomics  
rely upon cultivated clonal

cultures, early

Metagenomics - Wikipedia  
- Introduction. All plants

and animals, from simple  
life forms to humans, live in

close association with  
microbial organisms.

Several advances have  
driven the perception of

microbiomes, including: the  
ability to perform genomic

and gene expression  
analyses of single cells and

of entire microbial  
communities in the
