Tue, 05 Feb 2019 22:20:00 GMT the strength fracture and workability pdf - Concrete, usually Portland cement concrete, is a composite material composed of fine and coarse aggregate bonded together with a fluid cement (cement paste) that hardens over time—most frequently a lime-based cement binder, such as Portland cement, but sometimes with other hydraulic cements, such as a calcium aluminate cement. It is distinguished from other, non-cementitious types of concrete ... martensitic second phase in the form of islands. Usually they are low-carbon low-alloy materials with 10-40 vol.% hard martensite or martensite-austenite particles embedded in a ductile ferrite matrix. As they combine high strength and good formability at low production costs they are widely used for automotive applications.
